

Speaker 3: Jerome C. Glenn, Director, The Millennium Project, United States

Jerome C. Glenn co-founded and directs the Millennium Project, a leading global participatory think tank supported by international organizations, governments, corporations, and NGOs, which produces the internationally recognized State of the Future annual reports for the past 12 years. Glenn invented the "Futures Wheel", a futures assessment technique; Futuristic Curriculum Development, and concepts such as conscious-technology, transinstitutions, tele-nations, management by understanding, definition of environmental security, feminine brain drain, just-in-time knowledge, information warfare, feelysis, and nodes as a management concept for interconnecting global and local views and actions.

He has consulted for governments, corporations, UN organizations, and NGOs on both futures concepts and methods. Saturday Review named him among the most unusually gifted leaders of America for his pioneering work in Tropical Medicine (National Leprosy System while a Peace Corp Volunteer), Future-Oriented Education, and Participatory Decision Making Systems in 1974. He was instrumental in naming the first Space Shuttle the Enterprise and banning the first space weapon (FOBS) in SALT II.

He has keynoted conferences for over 200 corporations, associations, governments, universities, and international organizations. He has published over 100 future-oriented articles, and several books (Future Mind, Linking the Future, and co-author of Space Trek), and editor of Futures Research Methodology versions 1.0 and 2.0, and has just completed the design for a global energy collective intelligence system. Other research is available at www.millennium-project.org.
